

We're
taking the
troubles
out of the
bubbles.

Some shampoo and bath formulations not only create a lot of lather, but also a lot of irritation.

Cyanamid helps you maintain those mountains of lather, while minimizing irritation.

How? With a line of half-ester sulfosuccinate surfactants and cocoamido betaines.

They not only help reduce irritation, and have excellent foaming — and foam retention — qualities, they also help leave hair soft and manageable. Even let you create brilliant transparent gels that open exciting new vistas in shampoo jellies, bubble bath droplets, transparent soaps and other products.
