

Q: Who Makes More Different Corn Sweeteners Than Anyone Else In The World?

A: Staley!

For more than 75 years Staley has worked to unlock the magic of corn, and we now produce a broader spectrum of sweeteners from this basic commodity than any other processor in the world. Staley can supply you with over 24 different sweeteners covering the entire range of products and technologies in use today. These include ISOSWEET 5500, "The Bottlers' Syrup"; ISOSWEET 100, our 42% Fructose Syrup; STALEYDEX Dextrose; SWEETOSE Syrups; NETO High Maltose Syrups; and Staley Regular Conversion Syrups and Solids.

Using sophisticated processing chemistry in precisely engineered, computerized plants, Staley

makes the most of all the magic there is in a kernel of corn. No one does it better, and no one makes a greater variety of high quality sweeteners to meet your needs. . . so the next time someone tells you about their experience in sweeteners, ask them if they are from Staley.
