

Lipophilic
(fatty)

Hydrophilic
(water compatible)

We juggle portions of molecules to produce a most versatile series of emulsifiers.

Ethoxylated sorbitan esters, monoglycerides, sorbitan esters from PVO.

DREWMULSE® (industrial) and DREWPONE® (food) ethoxylated sorbitan esters, DREWMULSE monoglycerides

and DREWMULSE (industrial)/DREWSORB® (food) sorbitan esters . . . a most versatile series of emulsifiers. This versatility stems from our adroit juggling of the lipophilic (fatty) and hydrophilic (water compatible) portions of the molecules . . . depending on the fatty acids used and the degree of ethoxylation.

The end result: the ideal emulsifying capability required for

the application . . . for both oil-in-water and water-in-oil emulsion covering the entire phase ratio ranges. Their toxicological acceptability makes them choice emulsifiers for use in today's cosmetic, toiletries, and food products, as lubricants in the plastics and fibers industries.

Call or write us for further information on our ethoxylated juggling act.
