Reproducible Particle Control Time After Time After Time

A *Gaulin Homogenizer* gives you particle control no other fluid processing equipment can match. Not only can you break particles down to any size but you can reproduce this size accurately at any time.

This ultimate particle control means you can improve practically every mechanical, electrical and chemical property of your products.

A new universal fluid end and new power end increase capacity up to 100%. Lower operating speeds and longer stroke reduce maintenance. Both initial investment and processing costs are substantially reduced.

Two other Gaulin machines are also available to lower processing costs. Gaulin's Sub Micron Disperser simplifies disper-

sion of solids or other difficult materials. And a new 2-stage Colloid Mill with unique "Counter-Flow" principle provides more milling energy per horsepower.

GTA (Gaulin Technical Assistance) will help you test your product and determine which equipment is best for you. Just contact your local Gaulin Representative. He's listed in Chemical Engineering Catalog.

MANTON-
Gaulin

MANUFACTURING CO., INC.
82 Garden Street, Everett 49, Mass.

World's largest manufacturer of stainless steel reciprocating pumps, pressure exchange pumps, dispersers, homogenizers & colloid mills
