

*SENSING that they HAVE ONLY MOMENTS to LIVE,
BUBBA & BABS SEIZE the MOMENT.*

It's happening. Our SAG® foam control agents are getting bigger, stronger, and more powerful. And bubbles everywhere are sensing the danger. They're at wit's end because of our commitment to silicone technology. They're popping each other out of their misery because we're so cost effective and meet current FDA, USDA, and BATF requirements and Food Chemicals CODEX specifications, and are acceptable under Jewish dietary laws. They know that there is no way to survive. How can you rid yourself of these disruptive bubbles in your processing of food products? Call Union Carbide at 1-800-331-9275. And burst their bubble world forever. SAG® Foam Control Agents
