

Emery's comprehensive line of coconut fatty acids promises the right quality/performance balance for your needs.

Emery offers you the widest choice available in a line that includes general purpose, low I.V. and stripped coconut acids. And we've also expanded our line of high purity fractionated acids to include acids from C₈ to C₁₈. So we can give you the ideal fatty acid for nearly any application. Plus a lot more.

Emery extras give added value.

As important as this wide selection are the extras that go with all Emery chemicals. Things like consistently high quality and product uniformity. And technically trained sales representatives to help you when you buy . . . and

competent technical service — if ever needed — after you buy.

A new brochure is now available with full information on Emery coconut fatty acids and the complete line of high purity fatty acids from C₈ to C₁₄. Just use the coupon to request a copy of this brochure or a sample of any of the coconut fatty acids shown above.
