

What Italian sausage can learn from a Greek salad.

Tenox® TBHQ antioxidant has been used in vegetable oils for years. Now Tertiary-Butyl-Hydroquinone (TBHQ) has U.S. Department of Agriculture approval for animal fats as well.

If you're re-evaluating antioxidants, and a lot of people are, you'll be happy to know about Tenox® TBHQ antioxidant.

It's helped garnish salads and fry chickens for some time.

And now its effectiveness can be used in many varieties of sausage, pre-grilled beef patties, rendered animal fat and chicken fat.

It adds no objectionable odor or flavor. Plus, Tenox TBHQ can be combined with BHA to provide carry-through protection to finished food products.

So if your products contain edible animal fats, they can also contain Tenox TBHQ.
