

# GLYDANT™

## The preferred preservative for cost effective antimicrobial protection.

Glydant is a highly cost effective preservative that protects cosmetics and toiletries from bacteria (both gram-positive and gram negative), yeast and mold growth. Glydant's slow release, long-lasting, low cost, effective antimicrobial activity has been demonstrated at low concentrations. Extensive tests prove Glydant has excellent

stability over a wide pH range and temperature conditions.

Safe and easy to handle in laboratory evaluations and plant production, Glydant may be added at any stage of the formulation process.

Wherever prolonged antimicrobial action is needed, as in "liquid soaps", shampoos and hair conditioners, formulators know they can rely on Glydant.

Samples and technical data may be obtained from your local Glyco technical representative or, for immediate service, phone (800) 243-8022.
