

**Sticky, viscous
liquid problems
convert to
easy-to-handle
“dry liquids”
with Manville
functional
fillers.**

Manville Micro-Cel® functional fillers have exceptional high liquid absorption capacities. Dry liquid concentrates containing as much as 60-90% of the active ingredient can be formulated and still act as free-flowing powders.

Micro-Cel is capable of absorbing up to 6x its own weight which makes it ideal as an inert carrier and conditioner for a wide range of industrial uses.

In the chemical industry, hazardous liquids are converted to dry, free flowing powders for safer, easier handling, transporting and storage. Other applications are found in insecticides and pesticides, plastics, rubber, food processing and the pharmaceutical industry.

To learn more about Micro-Cel and Celite® functional fillers and their specific physical properties, contact your nearest Manville sales representative or distributor. Call toll-free: 1-800-243-8160 (in CT, 1-800-842-0225) or contact Manville, Filtration & Minerals, P.O. Box 5108, Denver, Colorado 80217 U.S.A. Phone: 303-978-2656.
