

The natural pulpy look the creamy smooth look

National can help you formulate both

Everybody's a food expert. But all the experts don't agree. Some like pulpy sauces and gravies. Some like them creamy smooth. Now you can satisfy them all.

We've developed a new starch, Textaid. It restores the rich natural pulpy look that's often lost in high-temperature processing. Use it alone or blend it with Col-Flo® 67 to create the texture you want.

Use Textaid in many different dishes: soups, meat sauces, baby foods, cream fillings, cookies, crackers, dietetic foods—even fruit drinks. Want more information? Formulation help? Contact:
