

When you put a food
into a food,

you can protect it against losing moisture

or picking up more than it needs

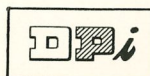

... with MYVACET Distilled Acetylated Monoglycerides

A MYVACET® coating helps prevent dehydration of moist foods like raisins. Or it can help protect them against excess moisture in other foods with which they are combined.

MYVACET Distilled Acetylated Monoglycerides are themselves not only edible, but actually nutritious. They are useful as coatings on a variety of food products, and they are effective lubricating-release agents. They belong to an extensive family of food products with

which we help you solve problems of food handling and texture. Other members of the family are MYVEROL® Distilled Monoglycerides and MYVEROL Distilled Propylene Glycol Monoester.
