

DYNATROL BLENDS REACT AT YOUR COMMAND

Reactions don't just pop up unexpectedly with DYNATROL products! Producing DYNATROL blends through Germantown Manufacturing Company's unique DYNAFUSION process permits the activation of ingredients at selected times.

DYNATROL products:

- Protect against clumping of hygroscopic ingredients.
- Delay activation until heat or moisture is applied.
- Prevent activity during dry storage.

DYNATROL products are combinations of high melting point lipids and functional food ingredients. When heat or liquid is applied, DYNATROL reacts to meet your requirements.

Call or write today and let The Germantown Manufacturing Company's Research and Development Department assist you in meeting your processing demands.

**WE'RE WORKING TO MAKE
YOUR PRODUCTS WORK.**
