

The fine art of enhancing food. Learn from the leader.

At Eastman, we're helping make good food better. And one of our specialties is distilled monoglycerides.

We were the first to introduce them and our's are still the most widely respected in use today.

That's why Eastman monoglycerides have been enhancing bread, pasta, coffee whitener, cake and other products for years.

Each is prepared with the same care you use to prepare your foods.

And this regard for thoroughness is found in

the preparation of every Eastman monoglyceride brand, Myvatex®, Myverol®, Myvaplex®, Myvatem® and Myvacet®.

The same concern is also found in all of our antioxidants. So if you'd like more information about monoglycerides or antioxidants, ask Eastman. And learn from the leader.
